

# Surrounded by clear sounds with respect for the earth

## A new live concert supported by H2&DX Inc.

H2&DX supports live concerts that utilize electricity from hydrogen fuel cells to suppress carbon dioxide generation. We create a new value in musical entertainment with eco-friendly & freshly generated electricity, which can provide high-quality sound.

THE LAST ROCKSTARS

### Instruments and lighting of concerts are powered by Fuel Cell Vehicle

We use Fuel Cell Vehicle and external power supply to turn on the instruments and lighting at live concerts. We support international artists caring about environmental issues such as "LUNA SEA" whose member SUGIZO owns FCV MIRAI himself, "THE LAST ROCKSTARS" formed in 2022 and U2.

Anyone can contribute to environmental protection by supporting live concerts utilizing hydrogen with us

### Green Support Program

*New Plan*

It becomes more necessary for companies to make explicit efforts to address environmental issues. By joining "Green Support Program" and support live concerts of popular artists, companies can respond to the social requirement
